

BARRINGTON RECYCLING SYSTEM

Since December, 1992, Barrington citizens have developed a voluntary recycling pay-per-bag system which saves tax dollars and helps conserve our natural resources. Each month this system improves as more citizens participate and deliver a cleaner product to the recycling center. To be sold at the best price, recycled products need to be carefully segregated and clean. Your attention to the following guidelines will help enhance our system.

The volunteers who work at the recycling center wish to thank the many citizens who take extra care to deliver clean, segregated materials. More volunteers are always welcome!
